Abstract (en)

[origin: EP1721801A1] The chair has a seat with a seat surface, and a closing bar pivotally mounted between a closed position and an open position, where the closing bar has a crossbar to be disposed across thighs of a passenger on the seat in the closed state. A locking mechanism has a contact surface that extends substantially parallel to the crossbar, and the contact surface faces towards the seat surface, where a distance between the contact surface and the seat surface is variable.
