Abstract (en)
[origin: EP1721835A2] The capsule has a base part (5), with distribution orifices (6), fixed on a body of a container. A cover (7) articulated on the part (5) is connected to the part by a film hinge. A cover opening control unit (8) has a tubular skirt (40) surrounding a portion of the part and connected to the part by elastically deformable arms. The arms extend in an extension of a return (41), perpendicular to an axis of the portion, in order to form a space between a plate (20) of the part and the return. An independent claim is also included for a method for manufacturing a container.
