Abstract (en)

[origin: EP1721847A2] The device has an auxiliary device (21) movable from a material web source up to a winding station, where the auxiliary device (21) includes two actuator devices (47, 48) that are movable in the same direction and arranged at a distance from each other. Each of the actuator devices includes a drive motor (50, 52), which acts on the auxiliary device with same tractive force. The drive motors are operable with a same torque. The auxiliary device is designed as a pipe. The actuator devices are designed as chains.
