Abstract (en)  
[origin: EP1721848A2] Double support rollers winding machine comprises a holding device (5), which can be moved, before completely pulling out of the guiding head (4) from the winding core or before discharging, from the winding bed at the outer faces of the outer winding roll (3). The holding device is fixably arranged on the side of the outer faces (6) of the winding roll. An independent claim is also included for the method for winding on the winding rolls.
