Abstract (en)

The fitting has a handle supported in a rosette, which is attachable on a stopping surface of a frame or leaf. A fitting safety device (3) has locking units (52) to fix the handle in a rotating position. The units (52) are formed on sliders (50, 51) that are movable parallel to the surface and engage at a locking disk connected with the handle. The sliders are supported in a console in a slidable manner and can be operated against a reset force by an operating unit. The sliders are movable together in the opposite direction and pre-stressed against each other by pressure springs.
