Abstract (en)  
[origin: US2007299376A1] A massage arm ( 1 ), comprising a massage element ( 2 ) for a massage unit that can be incorporated into a massage chair or similar, is hinged on at least one shaft that can be moved by a drive in the massage unit, and has an articulated connection to the massage element ( 2 ). To achieve an improved massaging action with the massage arm and the attached massage elements, it is proposed that the articulated connection comprise a ball-and-socket joint ( 3 ).
