Abstract (en)

[origin: FR2866251A1] The process involves carrying out sorting pass in respective sorting machines (2, 5) for sorting letters (1) and large size objects (4). A postal dispatch issued from corresponding sorted output at sorting machines is regrouped. Another sorting pass for sorting letters and the large object is carried out through a set of racks (8) by allocating different delivery points to form postal sending groups for a postman at each rack. An independent claim is also included for a device for implementing a process for organizing a tour of a postman with postal letters large size objects.
