Abstract (en)

[origin: FR2867166A1] The package has a barrel (3) including a central axle on which a pre-straightened metal wire (2) is disposed and an opening permitting winding of the metal wire. A lateral wall (9) of the barrel presents an extended form whose taper coefficient is defined as a ratio between larger dimensions of horizontal sections at a level of base (7) and top (8) of the barrel, where the ratio is less than 1. An independent claim is also included for a device for achieving a coil of pre-straightened metal wire.
