Abstract (en)
[origin: DE102004010118A1] The device has a drive motor and a gearbox with a position determination device with an electrical slip contact arrangement (26) with a contact (30) and a counter contact (36), whereby the contact or counter contact is mounted directly on a gearwheel. The slip contact arrangement causes first and second changes in an electrical signal in first and second park positions and the signal changes are evaluated by a device (28) that influences the control of the drive motor. An independent claim is also included for a windscreen wiper system.
