Abstract (en)
[origin: WO2005080697A1] The invention relates to a shower arrangement containing a long, flat profiled element to be vertically arranged, the plane rear side of said profiled element being embodied and defined in such a way as to be applied to a wall surface. A concealed fitting is arranged in the region of the rear side, said fitting engaging inside a concealed box in a recess in the wall surface. With the exception of operating elements and the shower attachment, there are no protruding parts on the front side of the profiled element, enabling the arrangement itself to have a flat structure. The space required for the sanitary fitting is provided behind the wall surface.
