Abstract (en)  
[origin: EP1724178A1] Markings are introduced to denote the coarsely-determined way points are installed. These are activated when the vehicle travels through or over the location. Errors in way point location from the coarse recording, are immediately compensated. For marking, radio frequency identification devices (RFID) are used. These also give out local information. Independent claims are included for rail or road sections marked as described, and corresponding recording apparatus.
