Abstract (en)
[origin: EP1724404A2] The system according to the invention for draining sewage from vehicles (14) comprises: a) a transit surface (102) on which vehicles (14), such as coaches or campers, can pass and stop; b) a collecting tank (1) arranged on the transit surface (102) and comprising in turn a collection area (100) arranged to collect and contain sewage drained from the vehicle (14) located above the same collection area. The collection area has such a size that it extends over at least half the predetermined maximum width (Lmax) of the vehicle. A vehicle can transit above the collecting tank (1) with at least one wheel resting upon the collection area. This facilitates the manoeuvres for bringing the vehicle (14) to the draining position, and allows eliminating the grids covering the draining area (14), as well as better cleaning and sanitising the tank (1).
