Abstract (en)

[origin: EP1724405A2] The shuttering is formed from components (4) in at least two connected layers. These are held together by clamps or braces accommodated in the internal space of the shuttering. A mounting and alignment component is fastened to a background. This has spacing corresponding with profile sections. The wall components (2) are positioned on this by their edges, especially along the line of the lower edges. They are interlocked in position in an upright axial direction with respect to their plane, for shuttering component connection.
