Abstract (en)

An adjustable fixing device (1) for a roof drain (2) adapted to be mounted in a roof construction consisting of a supporting roof (3) and a water sealing membrane layer (4), possibly interleaved with isolation (5). A first portion of the device (1) is fastened to the roof drain (2), or to a part rigidly fastened thereto, and a second portion is fastened to the supporting roof (3). The device includes a ring-like member, fitting around a pipe (9) integral with the drain (2). At least one enclosing member encloses, at least partially, the ring-like member and has a surface adapted to mutually cooperate with at least a part of the ring-like member. At least one tightening member is adapted to apply a pressure on the at least one member, whereby the surface of the at least one member presses on the corresponding surface of the ring-like member, which thereby clamps the pipe (9).
