Abstract (en)
The nozzle ring includes a cover (3) for the slot openings which lead radially outward. A downstream region of the guide blades projects beyond the outer ring. A cover ring projecting over the outer ring, is located in the region radially outside the downstream flow region (25) of the guide blades. The outer ring includes slots between the blades, with a cover (3) over their radially outer ends. The methods of slot sealing include insertion of a sealing mass or covering with welded sheets.
