Abstract (en)

[origin: EP1724472A2] The system has an actuator (24) for turning a leader ring (22) of a stage (10) of a variable-pitch stator vane via a bell crank type leader unit (26) pivotally mounted on a casing (12). A synchronization bar (30) transmits the turning movement of the ring driven by the actuator to a follower ring (22') of another stage (10') via a bell crank type follower unit (26') pivotally mounted on the casing. An additional crank (44) is interposed between the unit (26') and the ring (22') and is pivotally mounted both on the casing and the unit (26').
