Abstract (en)

[origin: EP1725068A2] A latch connector (25,26) is used to lock together two adjacent loudspeaker enclosures (2). The latch connector is designed so that the loudspeaker enclosures are joined together at a preset angle. The fixture may include a profile part (20) comprising matrix of holes, into which a locking pin can be inserted. Independent claims are included for an arrangement of several loudspeaker enclosures suspended one below the other, and for a method of forming the arrangement.
