Abstract (en)

[origin: WO2005087061A1] The invention relates to a stand (10) for the secure anchoring of a pole-like object, in particular a tree, christmas tree or similar, comprising a socket region (12) and a housing region (14), arranged therein, for a lower section of the object for anchoring and three retaining elements (16), arranged concentrically around the housing region (14), each of which may be pivoted about a horizontal axis (20) in a plane perpendicular to the longitudinal axis of the tree and which may each be clamped against the trunk section by means of a single tensioning agent, running in the retainer element (16) which cooperates with a tensioning device (32). According to the invention, the retainer elements (16) are each pivoted in inserts (34), which may be inserted in the vertical direction into housing pockets (36) in the socket region (12).
