Abstract (en)

[origin: WO2005089614A1] The invention relates to a suction cleaning attachment (1) for a vacuum cleaner (2), comprising a suction line (5). A baseboard brush (6) is held on the suction cleaning attachment (1) while being mounted, with regard to the direction of displacement (r), on an outer edge and is also connected to the suction line (5). The suction cleaning attachment (1) has a cleaning brush that rotates about a horizontal axis. In order to improve the suction cleaning attachment combined with the baseboard brush, the invention provides that the baseboard brush (6) is designed so that it rotates about a vertical axis and that a drive of the baseboard brush (6) is derived from the cleaning brush via a gear mechanism.
