Abstract (en)

[origin: WO2005088044A1] The invention relates to a motor vehicle with central locking at least for the vehicle doors, provided with an electric switch (6), for switching the central locking into a locked/unlocked state and an opening handle (1), arranged to pivot on the inside of at least one vehicle door, for the opening thereof. The switch (6) is arranged with relation to the opening handle (1) within the vehicle door such that, on pivoting the opening handle (1) from a rest position (7) into a first switching position (8), a locking or unlocking state of the central locking is created and the locking or unlocking state is retained until a renewed pivoting of the opening handle (1) into the locking position thereof (8).
