Abstract (en)

[origin: FR2867318A1] The device has a line-to ground voltage (PT) varistor arranged between a phase (L1) to be protected and ground (T), and a neutral phase (PN) varistor arranged between the phase and neutral (N). An electrically insulating case (2) is adapted to receive the two varistors that form an electrical binomial. The varistors are mounted successively within the case to form a mounting binomial. An independent claim is also included for a process of manufacturing a protection device.
