Abstract (en)  
[origin: EP1726235A2] The device has a product applicator comprising an application unit (6) including plastic material branches that rejoin at their ends. The branches of the unit (6) define a cavity between them, where the cavity opens out on a side of the unit (6). The cavity extends along the branches and the branches are rigid for preventing the cavity from deformation between the moment in which the unit (6) dispenses the product and the moment in which the product is applied. An independent claim is also included for a method for make-up of skin or lips by utilizing a cosmetic product packaging and application device.
