Abstract (en)

Evacuation device for the enabling of evacuation of patients, elderly etcetera at fire and the like, including an inflatable part, inflatable with a gas tube, the device after the inflation constituting a through like part with inflated cushions under and on the sides of the person that is to be evacuated. Around the device runs a strap that form several handles along the edge. The strap extends further forward in the foot direction and ends with loops folded double to allow the pulling of the device on floor or ground. On the bottom side a separate layer with low friction is arranged, which does not constitute a wall in any of the inflatable spaces.
