Abstract (en)

The board has orientation-adjustable bindings each having a center (16, 17) defined as a rotation point of an orientation adjustment mechanism of the respective binding. The centers (16, 17) are separated by a distance (S) comprised between 45 and 55cms. A length of the board is defined by a distance separating front and rear end points (2, 3). A width of the board is defined by a distance separating points (7, 8) of sidecuts (9) arranged on a straight line (10) perpendicular to a median longitudinal axis (4) connecting the points (2, 3). The length to width ratio is lesser than 4.85.
