Abstract (en)
Prefabricated panel for construction of walls .- It is of the type formed from two layers, one being the base layer and the other upper one being of stone or similar which forms the visible face. The base layer (2) has the form of the mould in which the panel is manufactured and on this layer are arranged the wedges or slabs (3) of natural stone which define the visible face of the panel, being backed on to each other, occupying the entire surface of the mould and being perfectly joined due to being positioned on the material constituting the base layer (2) prior to its setting. The panel advantageously presents a rectangular outline with the lesser side staggered for the fitting of adjacent panels in the construction of the wall.
