Abstract (en)

[origin: EP1726780A2] The device has a peripheral groove of a rotor disk of a compressor. An insertion body (7) has radial bores with internal thread sections to receive balancing screws (16). Each bore lies in a certain rotational position of the rotor in an alignment with opening in an inner housing and another opening in an external housing. A transitionally arranged guiding tube (15) is provided for feeding screws and guiding tool (17) to the bores.
