Abstract (en)
The apparatus has an air passage unit to permit air flow generated by a ventilator. The passage unit is formed by a square, round or circular shaped baffle (30) that is provided on a pressure side or a suction side of a ventilator frame. The baffle is detachably arranged in a casing (22) of the ventilator. A separating plate separates a cooling chamber (10) for receiving chilled and/or frozen food from a cooling air channel. The baffle is arranged on the separating plate.
