Abstract (en)

[origin: WO2005082354A1] Cancers and /or malignancies can be treated by administration of a G1/S phase drug, which is preferably beta-lapachone, or a pharmaceutically acceptable salt, prodrug, metabolite, analog or derivative thereof, combined with an S phase drug, which is advantageously gemcitabine. This combination of a G1/S phase drug with an S phase drug results in an unexpectedly effective treatment of cancer. The invention includes methods of treating cancers by administering a combination of a G1/S phase drug and an S phase drug, pharmaceutical compositions comprising the combination of drugs used in these methods, as well as pharmaceutical kits.
