Abstract (en)

[origin: WO2005092614A2] The invention relates to a device for drawing at least one web of material and/or at least one web strand consisting of several webs of material into a folding apparatus, comprising an upper structure, at least one folding funnel, a cross-cutting device for separating a web of material transported in the upper structure and folded on the folding funnel into individual produces and comprising at least one guide rail, wherein a holding part with a guiding end of at least one web of material fixed thereto is displaceably guided on a path of the web of material through the upper structure. At least one guide rail is guided along the folding funnel.
