Abstract (en)

[origin: WO2005093169A1] The invention relates to a working tool for a piece of earth-moving machinery comprising a digging device (10) that is embodied as a bucket or scoop and delimits an accommodation space (24) for the material that is to be excavated, and a built-on device (12) which is disposed on the digging device (10), is removable from the support of the piece of earth-moving machinery as a structural unit along with said digging device (10), and is provided with an additional tool (14, 16, 17) that is pivotable towards the charging hole (43) of the accommodation space (24) by means of a swivel drive (36). In order to increase the number of possible uses, the swivel drive (36) encompasses a swivel shaft (42) which is located above the charging hole (43) and extends along more than half the width thereof while the additional tool (14, 16, 17) can be fixed to the swivel shaft (42) via connecting means (50).
