Abstract (en)

[origin: WO2005093646A1] The invention concerns a portable device for at least one-way communication with a terminal, comprising a micro-module including a chip, and further comprising an antenna enabling communication between the micro-module and a terminal provided the antenna is placed immediately proximate the terminal. Said device is characterized in that it comprises reproducing means removably receiving the micro-module, said antenna being supported by said reproducing means such that the micro-module is removable relative to the antenna.
