Abstract (en)

[origin: WO2005093772A1] The invention relates to a device for monitoring the level of a container of a compensation tank (1), more particularly a hydraulic motor vehicle braking system, comprising a float (3) that has a magnet (4) for actuating a switch (8) or a sensor. The invention is characterized in that the float (3) consists of several parts, namely a first float part (9, 11) and a second float part (10, 12) and the magnet (4) is encased between both float parts (9, 10, 11, 12).
