Abstract (en)
[origin: EP1728757A1] The fork lift truck has a vertically movable load pick-up unit (1) with an associated device (9) for communicating with an identification system such as a RFID transponder. At least a common fixing device (7) and/or at least a common housing (5) is provided to contain the communication device and at least one further functioning component (4) which can comprise a camera unit for example. The further components can comprise devices for detecting the incline of the lifting frame, accelerations, contactless distance measuring devices, bar code readers and others.
