Abstract (en)

[origin: EP1728916A1] A haulage cable consists of two cables made of opposite = twisted strands (12) in a sheath (13) that links them by ribs (14.1). = The ribs allow elastic shear deformation with little resistance to = provide relative movement of the cables in the longitudinal direction = (L). The ribs (14.1) have openings (14.2) and during the relative = movement preferably carry no more than 10 % of the ultimate shear = strength with a 5 % extension.
