Abstract (en)

Armature for sliding panel (12) has an anti-break in device whereby via a spring gear (1), activated using a handle (3), at least one vertical connecting rod (3a) is coupled to a first bogie (5), which is coupled to a second bogie (7) when can be put on, that is assembled, around the back lower panel corner. It has a fixed bracket which has at least one lengthwise moving locking element to extend the connecting element. Said element can be slid via a movement deviation device into or out of contact with a fixably mountable contact seat and controlled via a lengthwise movement of the vertical connecting rod.
