Abstract (en)

[origin: EP1726771A1] The device has a lower link or apron link connected to an upper link or tube link (6) by an intermediate link, where the links are articulated between them along an articulation axis parallel to a geometric axis of a rolling tube (3). The link (6) has an attaching device (C) having anchorages formed by openings bored in a wall of the tube. The device has anchoring units (16, 17) whose distance is adjustable along a direction parallel to the articulation axis of the tube link. The apron link has, at its apron side end, a reversible anchoring assembly constituted of a hook. An independent claim is also included for a roller shutter comprising an apron attaching device.
