Abstract (en)

[origin: EP1728964A2] Drive arrangement for roller doors (17) comprises winding (5') and lifting devices (5) located in a common housing (21) each with an individual drive motor (9). The pulling device operates at least one lifting band (11) and the winding device adjusts the angle of inclination of the blinds using winding bands. The arrangement also contains a suspension or storage for the lifting and winding devices. Lifting and winding device and drive motors are all joined together as one unit.
