Abstract (en)

[origin: EP1729014A2] Control block for pressure media supply to at least one consumer (18,20) with high power needs and at least one smaller consumer (22) and a control block section suitable for control block, by means of which the larger of the consumers is supplied with pressure. Each user has a control block section (12,14,N) each with adjustable path valve (24) connecting pressure room (42,44) of consumer with pressure media source (B) or sink (T). The control block section for the larger consumer has two working connections (A,B), which are both connected to the pressure room, so that the pressure media flows via two parallel pressure flow paths in the direction of the consumer. The larger consumer can have two pressure rooms each with its own control block section.
