Abstract (en)

[origin: EP1729088A1] A deviation judging unit (101) judges whether a moving object has deviated from a guided route to a destination, a distance calculating unit (102) calculates the distance from a deviated point to a planned route point when the moving object has been judged by the deviation judging unit (101) to have deviated from the guided route before the moving object transits the planned route point present on the guided route, a route judging unit (103) judges whether the planned route point is transited based on a distance history calculated by the distance calculating unit (102), and a re-searching unit (104) re-searches a guided route based on the result of the judgment by the route judging unit (103).
