Abstract (en)
[origin: WO2005092513A1] The invention relates to a device (1), for painting and drying of endless materials, in particular, wire, whereby a paint applicator (2), for application of a layer of paint to the endless material and a dryer device (3), for drying the paint layer on the endless material, are provided. An initial cooling device (4) is arranged between the drying device (3) and a recirculating guide device (7), for recirculating the endless material to the paint applicator (2) and a recirculating cooling device (5) is arranged between the recirculating guide device (7) and a feed guide device (10), for feeding the endless material into the paint applicator (2). An outlet end (5') of the recirculating cooling device (5) for the endless material is arranged closer to the paint applicator (2) than an inlet opening (4') of the initial cooling device (4) for the endless material.
