Abstract (en)
[origin: US2008190150A1] The invention relates to a two-part turnbuckle lock for a door or flap, especially of switch cabinets or the like. Said lock comprises a housing (12), fastened on the door leaf (10) or flap, and an operating shaft (17). Said shaft is rotationally arranged inside the housing (12), is linked with a turnbuckle tongue (16) on the inside of the door leaf (10) in a rotationally fixed manner and can be coupled with an actuator (25), such as a handle, cylinder lock or the like on the outside of the door leaf (10). The housing (12), for the purpose of fastening on the door leaf (10), comprises a rosette (13) mounted on the outside of the door leaf (10) and an outer thread (14) on the inside of the door leaf (10) for screwing a fixing nut (15) thereonto until it rests against the door leaf (10). The inventive lock is characterized in that the rosette (13) and the housing (12) of the turnbuckle are configured as separate parts and can be interlinked by means of a positively locking connection (20, 21).
