Abstract (en)  
[origin: WO2005085659A1] A arrangement for adjustment of telescopically moveable elements, such as a shaft of a tool, includes an inner element (1) and an outer element (3), (302), where the inner element (1) is axially shiftable relative to the outer element (3), and one end of the outer element (3), (302) has a locking member (4) for locking the inner element (1) and the outer element (3), (302) relative to one another, said locking member (4) being manoeuvrable by a manoeuvring member (5) that is remote from the locking member (4) in a direction toward another end of the outer element (3), (302) via an affecting member (301) that is shiftable along or rotatable about an axis that is parallel to a lengthwise axis of the outer element said affecting member having a tube (301) that completely or partially encloses the outer element (302).
