Abstract (en)  
[origin: WO2005085962A2] The insert (1), preferably produced by injected plastic, comprises an annular body (6) bearing a clockwork (8), a top tubular extension (9), split pin (13) and a lower tubular extension (10) which is clamped between a bottom cup (5) and a top bezel (4). A dial plate (12) and a raised portion (11) are held between the top face of the insert (1) and a glass (3) engaged into the top tubular extension (9) and fixed by the engagement of the top ring (2). The split pin (13) ensures the dial plate orientation and prevents the uncontrolled rotation of the raised portion.
