Abstract (en)

[origin: WO2005096147A1] A context sensitive information management system and method for use in a system comprising a number of applications each able to display information in response to a user input and a contextual coprocessor. The method comprising the steps of; the contextual coprocessor storing a plurality of context definitions each defining information to be displayed; the user making an input to an application; said application displaying information in response to the user input; the contextual coprocessor identifying a stored context definition corresponding to a current context definition; and the contextual processor displaying the information defined by said identified stored context definition.
