Abstract (en)
[origin: WO2005088545A1] Images are created by the combination of a plurality of other images. Images created in this manner may be used to enhance cinema and advertising. In another aspect of the invention shapes are created through the manipulation of contours or silhouettes. This process of shape manipulation can form the basis of a "falling block" computer game in which the focus is on the shape of the object formed between the blocks.
