Abstract (en)
[origin: WO2005093673A1] The invention concerns a reliable, simple, economical and ergonomic dispensing machine requiring little maintenance, for example of bottled mineral water sold in pack or carboy, enabling a novel dispensing circuit to be set up which combines the practical aspect for the consumer by being closer to his residence with the ecological aspect for centralized recycling of empty packs, while promoting sales for water producers. Said automatic dispensing machine (1) consists of a box (10) comprising payment means (21) and/or means (22) for selecting products (2), a multistage unit for storing (30) products (2) provided with means for pushing forward (40) the selected product towards a transfer zone (50), transfer means (51) mobile inside the transfer zone (50) for seizing the product (2) from the storage unit (30), separating same from other stored products (2) by tilting same by a few degrees and bringing same opposite an outlet (60) closed by at least one trap-door (61) coupled with actuating means (65), thrusting means (70) for delivering the product (2) outside the box (10), a recycling container (80) adjacent the box (10) provided with an inlet (81) closed by a controlled access trap-door (82) and means for monitoring the whole assembly. The invention is useful for automatic dispensing of consumer products.
