Abstract (en)
[origin: EP1731231A2] The machine has a set of processing compartments arranged in series in a process flow direction. Bottles are passed in bottle cells or other transport systems by presoaked baths (10), brine baths and spraying stations of the compartments. Device for removing labels works together with the individual bottles. An active arrangement for label removal with specifically directed fluid flow is provided in the presoaked bath that follows directly towards a bottle feeding.
