Abstract (en)

[origin: EP1731267A2] The fount has two identical matrices each with a hollow cavity which extends laterally on each edge through a matrix junction surface. The surface forms teeth (3) and interstices (4) having combined forms such that the teeth and the interstices imbricate one another from one matrix to another during mutual connection of the matrices. The teeth and the interstices placed on a side of a median longitudinal plane of the cavity align respectively, for each matrix, on the interstices and the teeth placed on the other side of the longitudinal plane.
