Abstract (en)

The tray has a container (1) provided with an inlet (6), that is closed by a lid (7), where the lid comprises a side wall and an upper wall (8). The lid is fixed on the container by a lock mechanism. The upper wall is connected to the side wall in a separable manner and comprises a slipsheet tab (11) projected above the side wall of the lid. The side wall is integrated to an annular unit (15), which axially penetrates in the inlet and is stopped against a shoulder of the side wall when the lid closes the container.
