Abstract (en)
[origin: EP1731445A1] The invention relates to a secondary package (1) for gathering a plurality of primary packages (2), comprising a flat base (3) supporting said packages, and an envelope (4) that surrounds the base (3) and holds the packages (2) together. Said base (3) comprises a medium folding line (5) that pivotally connects two halves (3a,3b) of the base supporting the packages (2), and comprises a handle (6) disposed vertically between the base halves (3a,3b), along the folding line (5), and said envelope (4) comprises a transversal precut (7) in the region of the folding line, along the lateral sides (8) and the top side (9) of the secondary package, so that when the envelope (4) is opened along said precut (7), it still holds tightly the packages (2), and the base halves can be pivoted around the medium folding line (5) to allow access to the handle (6).
